

6 Months Training TR-104 Full Stack Development

April, 2026

Day 11 – Realtime Updates Implementation and Poster Design

1. Objective of the Day

The objective of the day was to implement realtime updates in the application and continue designing posters for live projects.

2. Tasks Performed

- Implemented realtime data synchronization using Firestore
- Enabled automatic updates of notes across multiple users
- Ensured changes made by one user are reflected instantly for others
- Integrated realtime listeners for note data
- Tested collaboration by updating notes from different user accounts
- Verified consistency of data across sessions
- Designed posters for live projects using Canva
- Refined layouts and spacing for improved visual clarity
- Maintained consistency in fonts and color themes

3. Tools / Technologies Used

- Angular Framework
- Firebase Firestore
- AngularFire
- Canva

4. Key Learnings

- Realtime updates are essential for collaborative applications
- Firestore supports live data synchronization efficiently
- Data consistency across users improves user experience
- Realtime systems require proper testing across multiple users
- Canva helps maintain consistent design output

5. Challenges Faced

- Managing realtime updates without causing data conflicts
- Ensuring synchronization across multiple user sessions

6. Solutions

- Tested realtime updates using multiple user scenarios
- Verified Firestore listeners for accurate data updates

7. Conclusion

- Successfully implemented realtime collaboration feature
- Continued improving poster designs with consistent styling
