Day 14 – Comments System Implementation and Poster Design

1. Objective of the Day

The objective of the day was to implement a comments system for notes and continue designing posters for live projects.

2. Tasks Performed

- Implemented functionality to add comments on notes
- Stored comments data in Firestore linked with specific notes
- Enabled multiple users to add comments on shared notes
- Implemented realtime display of comments using Firestore listeners
- Ensured proper association between users and their comments
- Tested comment functionality across different user accounts
- Verified realtime updates of comments
- Designed posters for live projects using Canva
- Improved alignment and visual consistency in poster layouts
- Refined typography and spacing for better readability

3. Tools / Technologies Used

- Angular Framework
- Firebase Firestore
- AngularFire
- Canva

4. Key Learnings

- Comments enhance collaboration in multi-user applications
- Firestore supports realtime data updates effectively
- Proper data linking is important for maintaining relationships
- Realtime features improve user interaction
- Canva helps create visually structured and consistent designs

5. Challenges Faced

- Managing realtime updates for comments without delay
- Ensuring correct linking between comments and notes

6. Solutions

- Used Firestore listeners for realtime comment updates
- Structured data to link comments with corresponding notes

7. Conclusion

- Successfully implemented comments system with realtime updates
- Continued improving poster designs with better visual structure
