

6 Months Training TR-104 Full Stack Development

April, 2026

Day 18 – Performance Optimization and Poster Design

1. Objective of the Day

The objective of the day was to optimize application performance and continue designing posters for live projects.

2. Tasks Performed

- Reviewed application performance and identified areas for improvement
- Implemented lazy loading for modules to reduce initial load time
- Optimized data fetching to minimize unnecessary API calls
- Cleaned and refactored code for better efficiency
- Improved application responsiveness during user interactions
- Tested performance improvements across different features
- Designed posters for live projects using Canva
- Refined layout structure and alignment in poster designs
- Ensured consistency in visual elements and typography

3. Tools / Technologies Used

- Angular Framework
- Firebase Firestore
- AngularFire
- Canva

4. Key Learnings

- Performance optimization improves user experience
- Lazy loading reduces application load time
- Clean code enhances maintainability and efficiency
- Optimized data handling reduces system overhead
- Canva helps maintain high-quality and consistent designs

5. Challenges Faced

- Identifying performance bottlenecks in the application
- Balancing optimization without affecting functionality

6. Solutions

- Analyzed application behavior and optimized step-by-step
- Tested performance after each improvement

7. Conclusion

- Successfully optimized application performance
- Continued improving poster designs with better structure and consistency
