

# **6 Months Training TR-104 Full Stack Development**

**April, 2026**

## **Day 2 – Firebase Integration and Poster Design**

### **1. Objective of the Day**

The objective of the day was to integrate Firebase with the Angular application and continue designing posters for live projects.

### **2. Tasks Performed**

- Created a Firebase project using Firebase Console
- Connected Angular application with Firebase configuration
- Integrated Firebase services into the Angular project
- Set up Firebase Authentication and Firestore database
- Verified successful connection between Angular and Firebase
- Tested basic Firebase functionality within the application
- Designed posters for live projects using Canva
- Customized layouts, fonts, and color schemes based on project requirements
- Exported finalized posters in required formats

### **3. Tools / Technologies Used**

- Angular Framework
- Firebase
- AngularFire
- Canva

### **4. Key Learnings**

- Firebase provides backend services like authentication and database
- AngularFire enables smooth integration with Firebase
- Proper configuration is required for successful integration
- Backend connectivity is essential for dynamic applications
- Canva helps in creating visually appealing designs efficiently

## **5. Challenges Faced**

- Configuring Firebase correctly with Angular application
- Ensuring proper connection without runtime errors

## **6. Solutions**

- Followed step-by-step Firebase integration process
- Verified configuration and tested functionality after setup

## **7. Conclusion**

- Successfully integrated Firebase with Angular application
- Continued designing posters with improved design consistency
