Day 20 – Final Feature Integration and Poster Design

1. Objective of the Day

The objective of the day was to ensure all implemented features of the CollabNest project are properly integrated and stable, while continuing poster design for live projects.

2. Tasks Performed

- Reviewed all implemented features including authentication, notes system, sharing, and collaboration
- Verified integration between frontend and Firestore database
- Ensured smooth interaction between all modules of the application
- Checked role-based access, realtime updates, and permissions functionality
- Identified and resolved minor inconsistencies in feature integration
- Ensured overall stability of the application before final testing phase
- Designed posters for live projects using Canva
- Refined final poster outputs for better visual clarity and consistency
- Ensured all designs follow uniform branding and layout standards

3. Tools / Technologies Used

- Angular Framework
- Firebase Firestore
- AngularFire
- Angular Material

- Canva

4. Key Learnings

- Integration ensures all features work together seamlessly
- Stability is important before moving to testing phase
- Reviewing the complete system helps identify hidden issues
- Proper coordination between modules improves application performance
- Canva helps deliver polished and professional design outputs

5. Challenges Faced

- Ensuring all features work correctly together without conflicts
- Identifying minor integration issues across different modules

6. Solutions

- Performed detailed system review and testing of each feature
- Fixed inconsistencies and verified functionality step-by-step

7. Conclusion

- Successfully integrated all major features of the application
- Prepared the project for final testing and deployment phase
