

6 Months Training TR-104 Full Stack Development

April, 2026

Day 3 – Authentication System Implementation and Poster Design

1. Objective of the Day

The objective of the day was to implement the authentication system in the CollabNest project and continue designing posters for live projects.

2. Tasks Performed

- Designed Signup and Login pages using Angular components
- Implemented forms using Reactive Forms for user input
- Integrated Firebase Authentication for user registration
- Implemented login functionality using email and password
- Added form validation for required fields and correct input format
- Implemented logout functionality for user session control
- Tested authentication flow for signup, login, and logout
- Designed posters for live projects using Canva
- Customized typography, layout, and visual elements for better appeal
- Exported finalized poster designs

3. Tools / Technologies Used

- Angular Framework
- Firebase Authentication
- AngularFire
- Reactive Forms

- Canva

4. Key Learnings

- Authentication is essential for user-based applications
- Reactive Forms provide better control over form handling
- Firebase simplifies implementation of authentication
- Validation improves user input accuracy and system reliability
- Canva helps maintain visual consistency across designs

5. Challenges Faced

- Handling authentication flow correctly between signup and login
- Managing validation errors and user feedback

6. Solutions

- Tested authentication with multiple user scenarios
- Implemented proper validation and error messages

7. Conclusion

- Successfully implemented authentication system in the project
- Continued creating visually consistent posters for live projects
